*For higher resolutions, see Absolute Encoder Options on pages 40-41.

The H38 is an explosion proof version of the field-proven H25 encoder series. The H38 is UL certified for NEMA Class 4X and 6 (outdoor non-hazardous locations) and Class 4X and 13 (indoor non-hazardous locations). It also carries a Class 1, Group D, Division 1; and Class 2, Division 1 Group E, F, and G rating for use in hazardous locations. It features a standard shaft seal, double bearing seals, and a cast aluminum housing with hard anodized and dichromate sealed finish. The H38 is suitable for use in petroleum service industries, solvent refining operations, spray painting applications, and explosive dust environments.

Rear View

Mechanical Specifications

Shaft Diameter: 3/8" nominal

Flats On Shaft: Two flats, 0.80" long X 0.30" deep at 90°

Shaft Loading: Up to 40 pounds axial and 20 pounds radial applied 1/4" from housing

Shaft Runout: 0.0005 T.I.R.

Starting Torque at 25° C: 4.0 in-oz (max)

Bearings: Class ABEC 7 standard

Shaft Material: 303 stainless steel

Enclosure: Die cast aluminum, hard anodized with dichromate sealed finish. Shaft seals and sealed bearings are standard to achieve environmental ratings.

Bearing Life: 2 X 10⁸ revs (1300 hrs at 2500 RPM) at rated load; 1 X 10¹⁰ revs (67,000 hrs at 2500 RPM) at 10% of rated load

Maximum RPM: 10,000 RPM (see Frequency Response, below)

Moment of Inertia: 4.1 X 10⁻⁴ oz-in-sec²

Weight: 64 oz typical (approx 4 lbs)

Electrical Specifications

Code: Incremental or Absolute (see Absolute version, pg 37)

Output Format: 2 channels in quadrature, 1/2 cycle index gated with negative B channel, or Absolute to 13 bits

Cycles per Shaft Turn: 1 to 72,000 (see table 2).

For resolutions above 3,600 see interpolation options on pages 32 and 32; Absolute to 8192 counts per turn

Supply Voltage: 5 to 24 VDC available

Current Requirements: 100 mA typical +output load, 250 mA (max)

Output Device: (see note 5)

4469: Line Driver, 5 – 15 VDC, V_{out} = V_{in}

7272: Line Driver, 5 – 28 VDC, V_{out} = V_{in}

7272: Line Driver, 5 – 28 VDC, V_{out} = 5 VDC (special feature)

7273: Open Collector, accepts 5 – 28 VDC

Protection Level: Reverse, overvoltage and output short circuit (See note 5)

Frequency Response: 100 KHz (see note 7)

Output Terminations: See Table 1, opposite page

Termination Type: Compression type, UL recognized. Accepts AWG 14 to 22, stranded wire, strip 1/4"

Note: Consult factory for other electrical options

Environmental Specifications

Enclosure Rating: NEMA 4 X & 6 (IP66), outdoor Non-Hazardous locations, NEMA 4 X & 13 (IP66), indoor Non-Hazardous locations

Temperature: Operating, 0° to 70° C; extended temperature testing available (see note 8, pg 50); storage: -25° to 90° C unless extended temperature option called out.

Shock: 50 g's at 11 msec

Vibration: 5 to 2000 Hz @ 20 g's

Humidity: 100% RH

Hazardous Area Rating: Underwriters Laboratories listed for use in hazardous locations; NEMA Enclosure 7. Class 1, Group D, Division 1, NEC Class 2 circuits only, or Class 2, Groups E, F, and G

NOTES & TABLES: All notes and tables referred to in the text can be found on pages 50 and 51.

Certifications

The H38 Explosion Proof Encoder is available with the following certifications:

EN 55011 and EN 61000-6-2

CENELEC EEX d IIB T4

U.S. Standards Class I, Group D, Division 1; Class II, Group E, F & G—requires labyrinth seal

Canadian Standards Class I, Division 1, Group D; Class II, Group E, F & G—requires labyrinth seal

1. Mounting is usually done either using the D-style square flange mount, E- or G-style servo mounts, or one of the standard face mounts, F1 for example. Consult factory for additional face mount options.
2. The shaft seal is recommended in virtually all installations. The most common exceptions are applications requiring a very low starting torque or those requiring operation at both high temperature and high speed.
3. Non-standard index widths and multiple indices are available by special order. Consult factory.
4. Complementary outputs are recommended for use with line driver type (source/sink) outputs. When used with differential receivers, this combination provides a high degree of noise immunity.

5. Output IC's

Output IC's are available in either Line Driver (LD) or Open Collector (OC) types. Open Collectors require pull-up resistors and so have higher output impedance. In general it is recommended to use a Line Driver style of output. They can either source or sink current and their lower impedance mean better noise immunity and faster switching times. Our applications specialists would be pleased to discuss your system requirements and the compatibility of your receiving electronics with Line Driver type outputs.

7272

Multi-voltage Line Driver: 100 mA source/sink. Input voltage 5 to 28 VDC standard (Note: $V_{out} = V_{in}$). Available with voltage regulator for 5 to 28 VDC input/TTL output (called out as a special feature)*. This driver is TTL compatible when used with 5 volt supply or with a voltage regulator option. Supply lines are protected against overvoltage to 60 volts and reverse voltage. Outputs are short circuit protected for one minute. Supply current is 120 mA typical (plus load current). This is the recommended replacement for 3904R and 7406R open collector outputs with internal pullup resistors. This is also a direct replacement for any 4469, 88C30, 8830 or 26LS31 line driver

4469

Multi-voltage Line Driver: 100 mA source/sink. Input voltage 5 to 15 VDC standard (Note: $V_{out} = V_{in}$). Available with voltage regulator for 5 to 28 VDC input/5V output (called out as a special feature)*. TTL compatible when used with 5 volt supply or with voltage regulator. Supply lines are protected against overvoltage to 60 volts and reverse voltage. Outputs are short circuit protected for one minute. Supply current is 90 mA typical (plus load current). This is the replacement for 3904R and 7406R outputs for systems operating at 15 volts and below. This is also a direct replacement for any 88C30, 8830, or 26LS31 Line Driver.

* Regulated Output Option:
Limit signal output current to 50 mA per channel on Supply voltages above 15 VDC.
Operation above the stated levels may result in thermal shutdown of the regulator.

7273

Open Collector: Current sink of 80 mA max. Current sourced by external pull-up resistor. Output can be pulled up to voltage other than supply voltage (30 V max). Input voltage 5 to 28 VDC standard. Supply current is 120 mA typical. This replaces prior IC's with designations of 3904, 7406, 3302, 681 and 689.

7406 (R)

Open Collector: Current sink of 40 mA max. Current sourced by external pull-up resistor. When called out as 7406R, pull-ups are internal and sized at approximately 100 ohms/volt and current sink is limited to 30 mA. Output can be pulled up to voltage other than supply voltage (30 V max) when the 7406 is used without internal pull-ups. Voltage regulator can be used to allow supply voltage up to 28 V (called out as a special feature). Supply current is 100 mA typical, 120 mA with internal pull-ups. The 7406R is replaced by the 4469 or the 7272 in system upgrades, or with the 7273 if external pull-ups are used.

3904 (R)

Open Collector: Current sink of 80 mA max. Current sourced by external pull-up resistor. When called out as 3904R, pull-ups are internal and sized at approximately 100 ohms/volt and current sink is limited to 70 mA. Output can be pulled up to voltage other than supply voltage (30 V max) when the 3904 is used without internal pull-ups. Supply Current is 80 mA typical, 100 mA with internal pull-ups. The 3904R is replaced by the 4469 or the 7272 in system upgrades, or with the 7273 if external pull-ups are used.

6. Special -S at the end of the model number is used to define a variety of non-standard features such as special shaft lengths, voltage options, or special testing. Please consult the factory to discuss your special requirements.
7. Higher frequency response may be available. Please consult with the factory.
8. Extended temperature ratings are available in the following ranges: -40 to 70°C, -40 to 85°C, -20 to 105°C and -40 to 105°C depending on the particular model. Extended temperature ranges can affect other performance factors. Consult with factory for more specific information.
9. Mating straight plug receptacles may be ordered from the factory:

For M12 use MS3116F12-10S

For M14 use MS3106F14S-6S

For M14/19 use MS3116F14-19S

For M16 use MS3106F16S-1S

For M18 use MS3106F18-1S

For M20 use MS3106F20-29S

For additional Accessories refer to page 46.

For standard pinouts, refer to the facing page.

Table 1: Incremental Output Terminations

The connector style will determine pinouts. For example, an encoder with ABC channels and an M18 connector uses the table to the right.

M14 CONNECTOR	M16 CONNECTOR	CHANNELS DESIGNATED IN MODEL NO.	
PIN	PIN	ABZ	ABC
E	A	A	A
