# **L15 Incremental** Optical Encoder

The L15 encoder provides the industrial marketplace with a rugged optical encoder in a size 15 servo package. Ideal for space-limited applications, these compact encoders discount size without compromising performance. Each L15 encoder package has field-proven ASIC electronics, sealed bearings and BEI's accurate code disk in an all metal housing to ensure ruggedness and reliability.

The L15 offers resolution to 2540 cycles per turn, quadrature output with index, a 1/4-inch diameter stainless steel shaft with 5 pounds radial or axial load capability and an electronic operating speed of 100khz, minimum.

Other features include voltage selection of +5, +12 or +24 VDC, differential line driver option with complementary ouputs, and an extendend temperature range for operation from -40°C to +85°C. The T2 interpolation option can be used to double the base resolution (i.e. 4096-T2).
